

Lead/lag with significance mask

Lag in year

09.06. - do we see the lead/lag in the raw data?

North Atlantic high latitudes

60-55°N leads:

45°N by 1.5 yrs

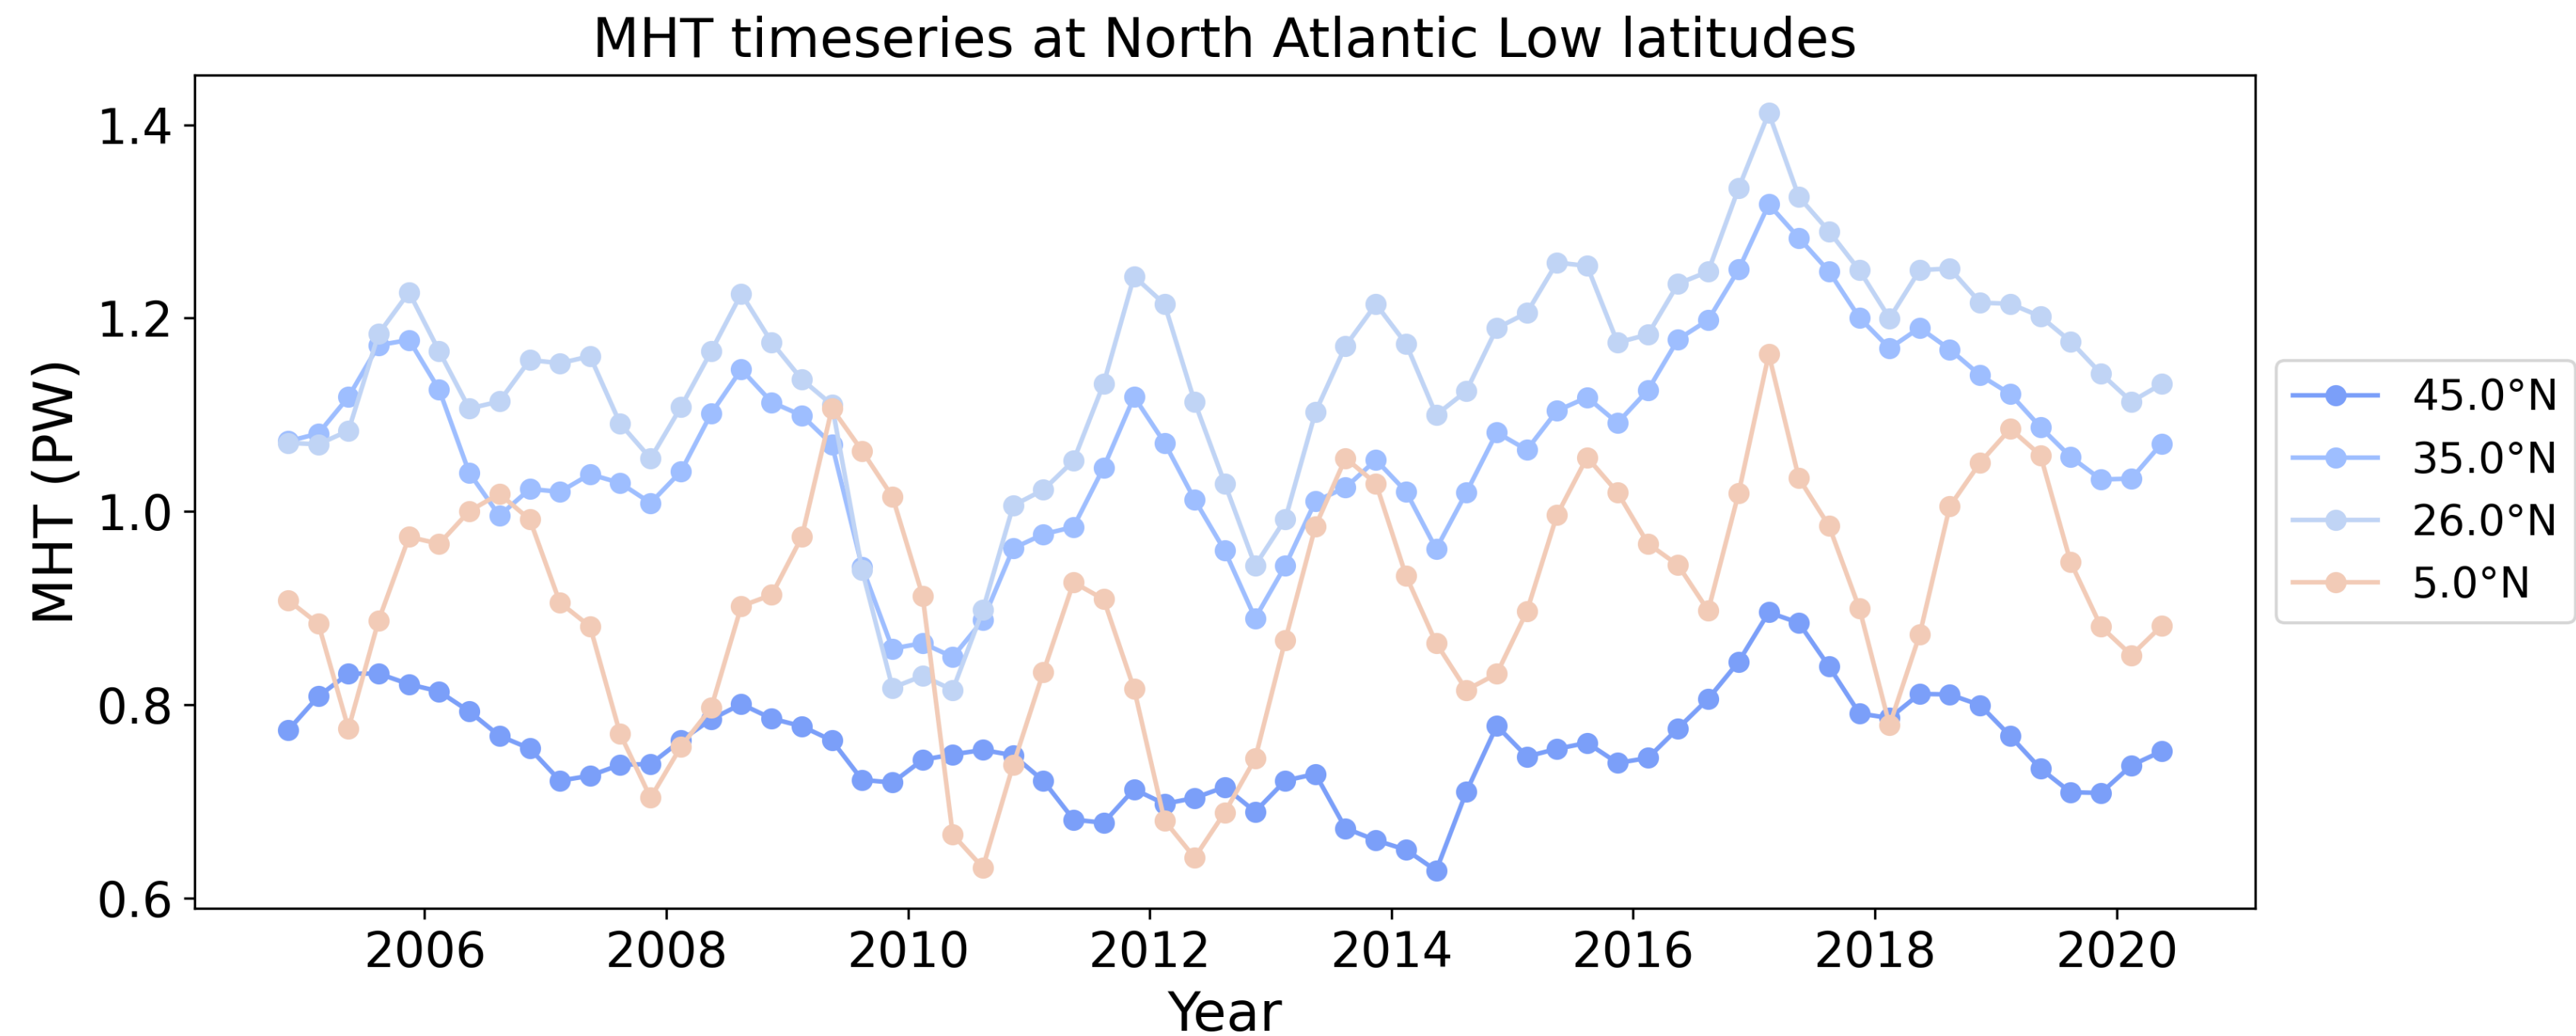

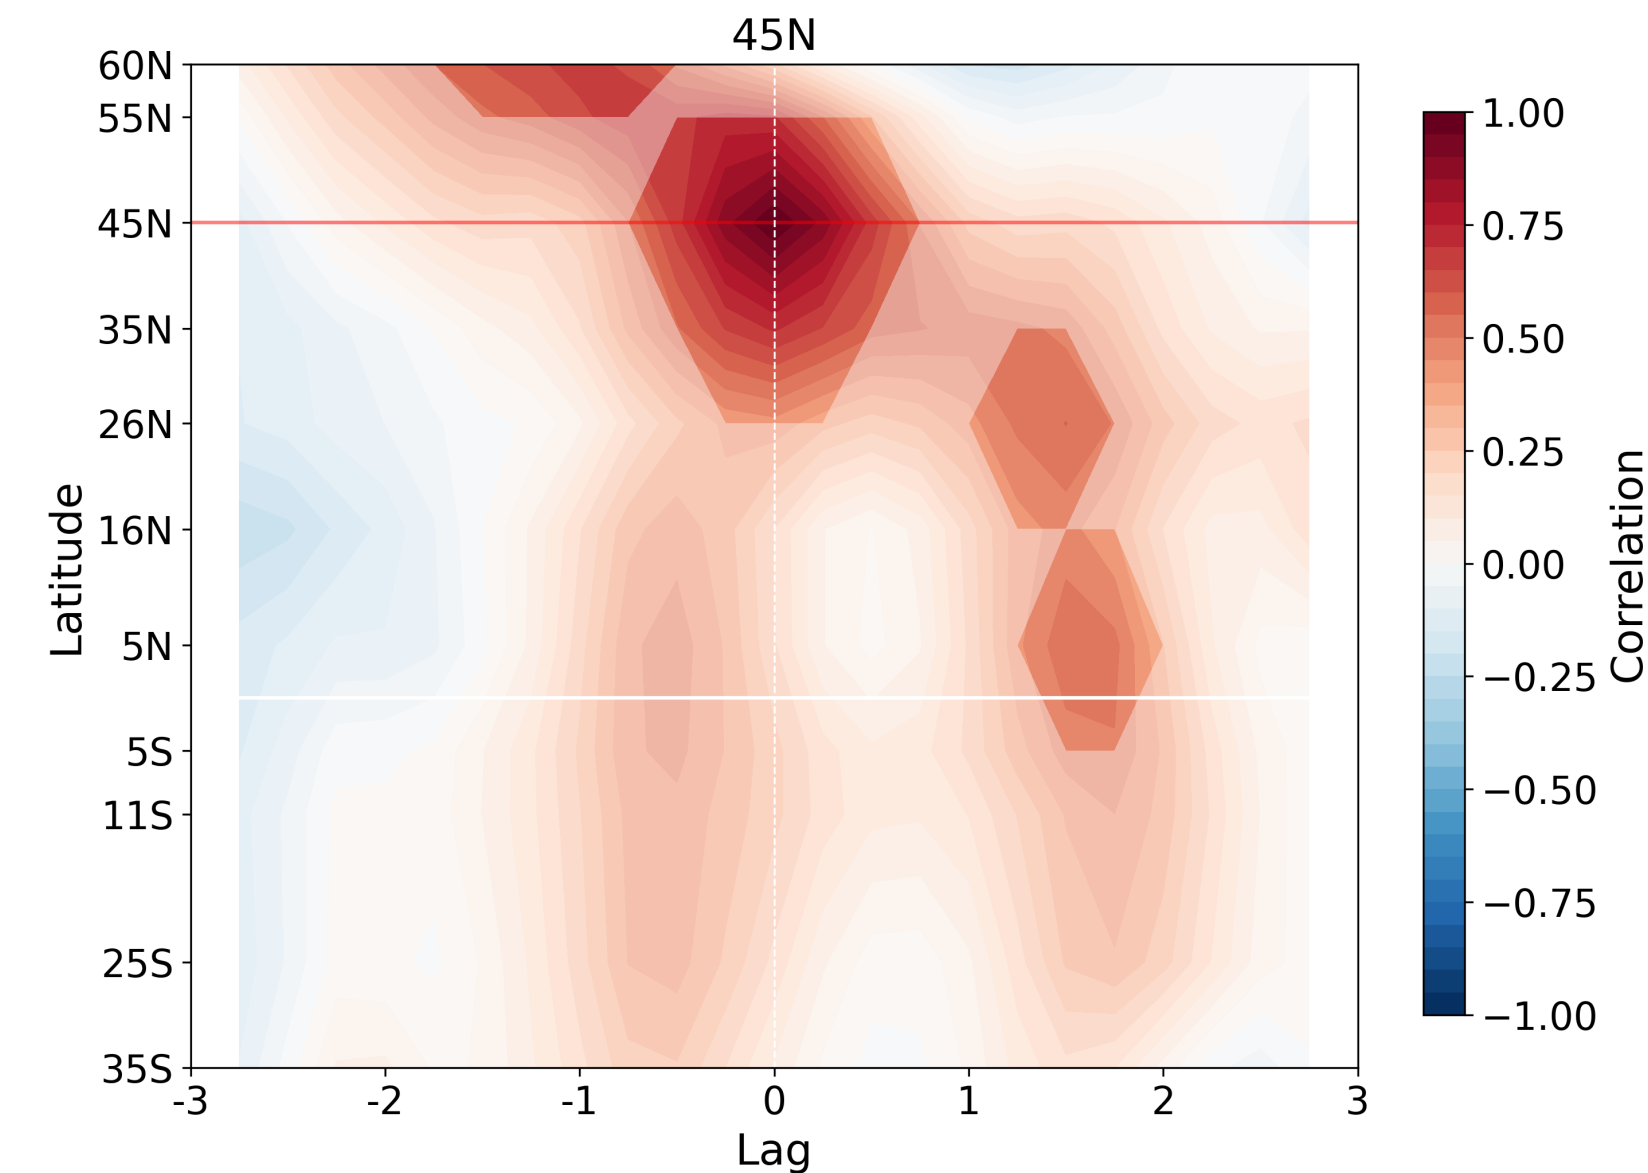

35°N by 2 yrs

From timeseries I find more coherent pattern overall

No true lead lag pattern visible?

09.06. - do we see the lead/lag in the raw data?

North Atlantic low latitudes

45°N leads:

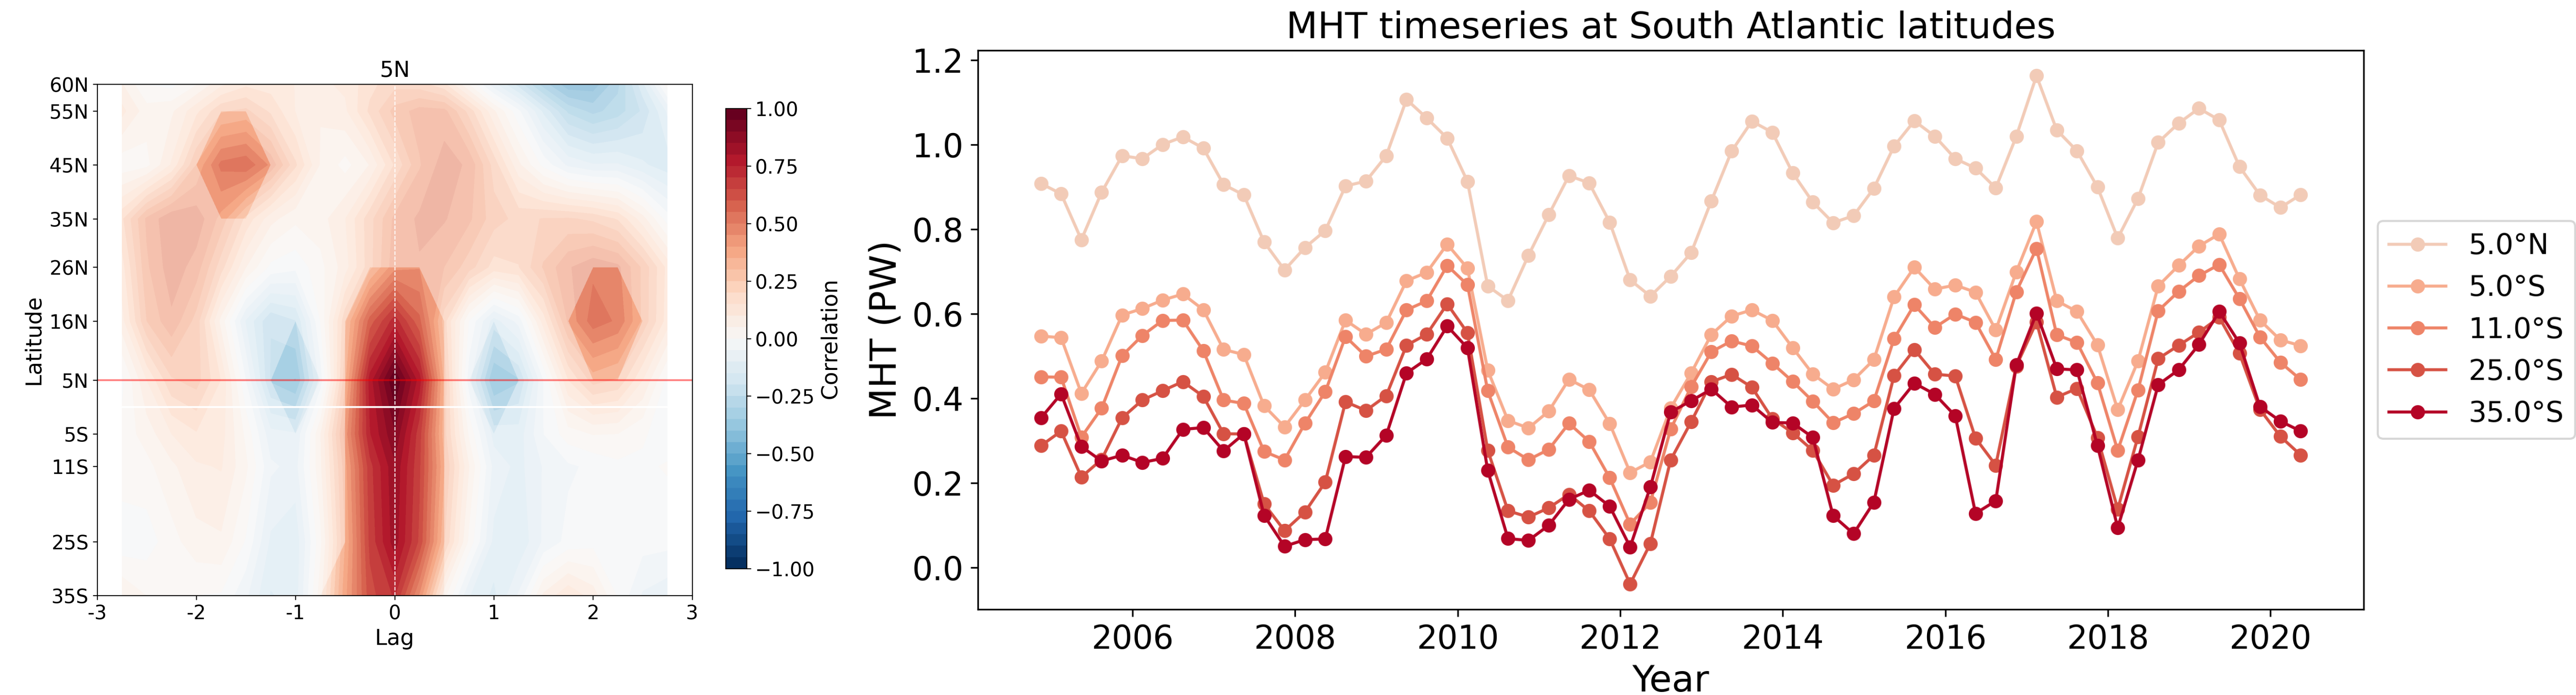

26°N by 1.5 yrs

5°N by 1.5-2 yrs

Also I don't see 45 leading anything here

09.06. - do we see the lead/lag in the raw data?

South Atlantic latitudes

South Atlantic latitudes **overall coherent** ! Including 5°N
